XSEL[®] Process Gauge - Stainless Steel Type 232.34 - Dry Case Type 233.34 - Liquid-filled Case

WIKA Datasheet 23X.34

Applications

- For applications with high dynamic pressure pulsations or vibration a liquid filled case and socket restrictor are available
- Suitable for corrosive environments and gaseous or liquid media that will not obstruct the pressure system
- Process industry: chemical/petrochemical, power stations, mining, on and offshore, environmental technology, mechanical engineering and plant construction

Special features

- Excellent load-cycle stability and shock resistance
- Solid front thermoplastic case
- Positive pressure ranges to 30,000 psi
- XSEL[®] Process Gauge with 5 year warranty on gauge and 10 year warranty on pressure system (see terms and condition
- All lower mount connection gauges are factory prepared for liquid filling

(LBM: must install membrane prior to field filling)

Note 1: The maximum continuous media temperature for this gauge is 212°F. However, higher temperatures can be maintained safely for short term exposure per table to the right. The user should consider

temperature error and gauge component degradation when expos-

ing gauge to any media or ambient temperature above 212°F. For

continuous use in either ambient or media temperatures above 212°F,

a diaphragm seal or other heat dissipating means is recommended. Consult factory for technical inquiries and application assistance.
